

Using Experience to Educate & Excite

Education at The Academy Charter School doesn't always have to include lectures, assignments or tests. In fact, thanks to a partnership with the non-profit organization known as ASSET STEM Education, education is taking on an exciting, hands-on format, particularly related to the fields of science, technology, engineering and math (STEM).

Through a grant from ASSET STEM Education, The Academy Charter School has received materials and resources for students to utilize in the classroom to enhance student investment in the learning process. Each supply box includes materials such as thermometers, tornado tubes and bubble boxes. These particular supplies are geared toward providing further insight to learning lessons on weather.

"It will help them learn a lot more than what they would have by just me talking to them," said Dennis Holderbaum, the head science teacher at Academy Charter School.

"To have this back when I started teaching would have been awesome. To have this as a student, I would have learned so much more," said Holderbaum.

The Academy Charter School is thankful for the funding and support provided by ASSET STEM Education and we look forward to future partnerships to facilitate experiential education opportunities in the STEM fields.
